

Greetings!

As you may know, M & M's founder and former owner Bob Mitchell has been transitioning toward retirement these past few years. The transition is now complete and Bob will be retiring from M & M this spring.

Bob started the company 40 years ago with the intent to service the design community's broadloom carpet and custom area rug needs. Throughout his career, Bob spent countless hours successfully promoting interior designers and the design profession. His list of awards, accolades and citations from ASID and the design industry are both endless and prestigious, and we are eternally grateful for the contributions, selfless attitude and mentoring he has provided not only to the industry but also to the entire M & M staff.

Please join us in wishing Bob many happy years in his retirement.

Fire Safe Properties of Wool

New wool patterns

New wool exotics

CEU Opportunity

Save the date for our wool carpet education course, "**From Farm to Floor**" presented by **Wools of New Zealand**. The course, specifically for designers, is accredited by *ASID*, *IDS*, *IDEC* and *IIDA* and features:

- * Key wool benefits
- * Myths and truths about wool
- * New Zealand sheep breeds
- * Carpet production process
- * Performance testing

Mark your calendar for **Tuesday, March 29th from 2:30-4:30pm**. Please meet at our showroom located at 8572 Katy Freeway, Suite 101.

Although winter is winding down and the warmth of fireplaces will soon be dormant, fire risk from candles, cigarettes and other pleasures remain. As such, we want to remind you of the exceptionally unsurpassed fire-safe properties of wool :

- Wool carpets have exceptionally low levels of flammability.
- Wool is naturally flame-resistant and its performance exceeds that of all other commonly used textile fibers.
- Wool is difficult to ignite due to its higher ignition temperature.
- Wool has a low heat of combustion and a low rate of heat release.
- If wool comes into contact with another burning surface, it won't melt or stick and is self-extinguishing once the initial source is removed.
- Wool forms an insulating char when it burns and emits less smoke and toxic gasses than are formed during combustion of synthetic fibers.

Wool is the logical choice for creating safe, healthy indoor environments. Stop by our resource library filled with numerous samples and see for yourself!
